

## Discover the strength of your patients in real-time

**DYNAMO** is the new dynamometry module for Lynx, aimed at professionals who need to know the strength that patients can exert in different movements during their phases of physical rehabilitation or readaptation.

The software is quick and simple and the sensor comes with a hitch that can measure tensions of up to 100kg

You can analyse in just one click:

- Maximum and average load
- The time to reach the maximum load
- The maintenance time of the maximum load

### ADVANTAGES

- Force visualization and analysis in real-time
- Comparison feature to evaluate differences
- Evolution of patient progress
- Free mode to create own protocols
- Automatic report generation
- Certified as a medical device
